PRODUCT SPECIFICATIONS

Our wood lounge frames are bench made exclusively in North Carolina by local craftsmen who have been building furniture in this area for generations. We use only kiln-dried Beech or beech hardwood (5/4 size minimum) or durable engineered wood panels crafted of multilayered solid wood veneers to reduce movement, twisting and warping. Key joints are reinforced with traditional double dowels, corner blocks and interlocking joints to withstand weight and stress. Exposed wood furnishings are handcrafted of the finest Beech or beech hardwoods. Rails are double doweled and corner blocked for maximum strength. All corner blocks are screwed and/or stapled to insure strength.

SPRING AND SEAT CONSTRUCTION

HC's primary spring and seat construction is the eight-way hand tied system. When eight-way construction is not possible due to design HC will use an appropriate seat construction based on industry standards.

- **Eight-Way Hand Tied System**

The best spring construction available when chair design allows. Provides comfort and long life by utilizing double coil springs tied to each other and frame rails. This allows springs to move only in a vertical motion and distribute weight load equally to chair rails.

Materials

- Eight and nine gauge solid carbon steel double coil springs.
- 100% waxed #6 nylon string.
- Eight knots per coil at top.
- Paper lined steel fastener secures coil to bottom.
- 54 strands/inch #650 Woven Poly Propex bottom.
- 7/8" steel nails attach strings to rails.
- System covered with FLW Polywoven material.

- **Rubber Webbing System**

Simple spring construction for Contemporary and Transitional seating that require very thin scaled designs. Provides comfort and strength by attaching rubber webbing from the front rail to the back rail and across seat from side rails.

Materials

- Ultraflex Type #550 rubber webbing 2" wide with 20% stretch load
- #10 steel staples attach webbing to frame rails.

- **No Sag System**

The best spring construction for designs that do not allow for eight way hand tied system. Used on most Contemporary and Transitional style seating and as a cost savings on Traditional style seating. Provides comfort and strength by using sinuous wire springs that are connected to front and back rails. These springs are then held together by a coated wire clipped to each spring.

Materials

- Eight and ten gauge sinuous wire springs in continuous 2" wide loops. These springs are spread 4" on center across seat.
- Coated stabilizing wire.
- System covered with FLW Polywoven material.

- **Foam Over Propex**

Simple seat construction for Contemporary and Transitional seating that require very thin scaled designs. Provides comfort and strength by attaching Polywoven propex material to all four side rails then covering with foam.

Materials

- #650 woven poly propex with 54 strands per sq. inch
- 500 7/16" steel staples attach propex to rails.

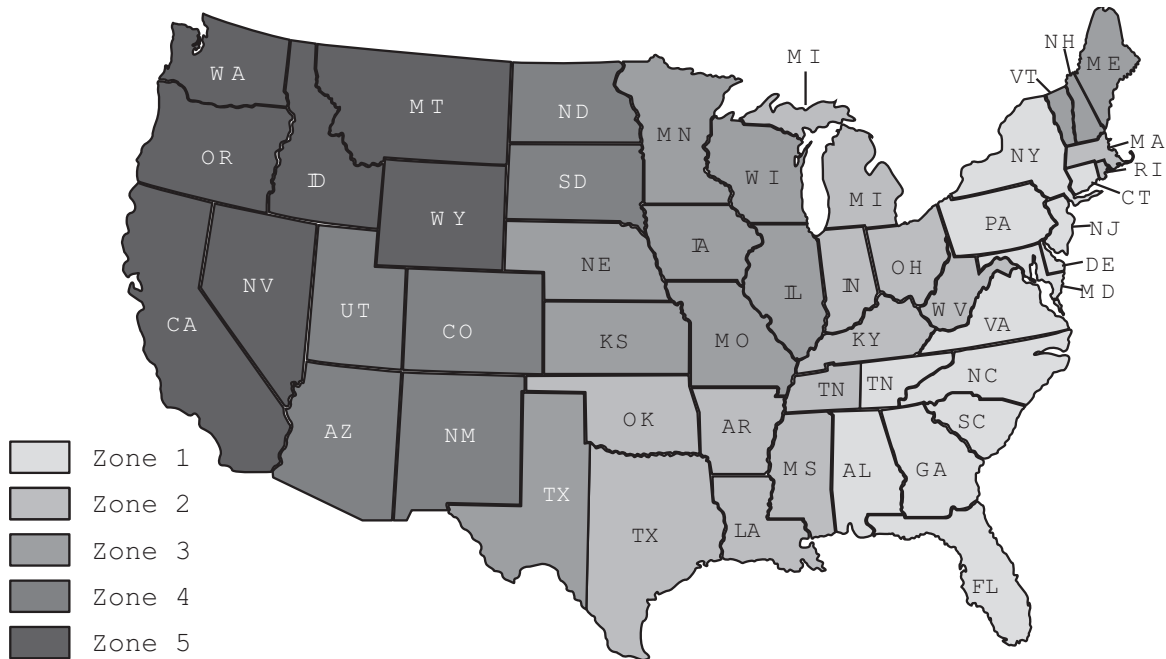

MECHANISMS

- **Manual Swivel Tilt Control** - Used for medium and large fixed back tilting chairs this spring control employs a low fulcrum and a dual "floating spring" concept to ensure both a balanced and stable ride throughout the full tilting range. Nylon contacts rubber cushion shock absorbers and self-lubricating fiberglass reinforced nylon bearings provide for long lasting quality.

Adjustments: A. Tilt tension control knob
B. Manual height adjustment
